## General Instructions:

1. There are total of 37 questions and four sections in the question paper. All questions are compulsory.
2. Section $A$ contains 20 questions of one mark each.
3. Section B contains 07 questions, short answer type questions and of two marks each.
4. Section C contains 07 questions, short answer type questions and of three marks each.
5. Section D contains 03 questions long answer type questions and of five marks each.
6. There is no overall choice in the question paper. However, internal choices are provided in two questions of two marks, two questions of three marks and all questions of five marks. An examinee is to attempt any one of the questions out of the two given in the question paper with the same question number.

## (Section-A)

Read the following passage and answer the questions 1 to 5 that follow:
Mahak is very sincere girl. She sits quietly in the class on her seat and does not disturb other students of the class. Contrary to it, Ravi does not adhere to his seat. Ravi keeps on moving in the entire class and talking to his friends. He would like to share the seat of every students of the class. Ravi does not wish to remain sitting on his seat. Sana has balance habits. She move to her friends only when it is required.

Q1. To which state of matter does Mahak resemble?
Q2. To which state of matter does Ravi resemble?
Q3. To which state of matter does Sana resemble?
Q4. Which is higher- Normal boiling point or standard boiling point of liquid?
Q5. What is Boyle's law ?

## Questions 6 to 10 are one word or one sentence answer.

Q6. Why does a moving car not show characters of a wave?
Q7. Give examples of state functions and path functions.
Q8. What is Baking soda and Baking powder?
Q9. How will you purify camphor containing non-volatile solids?
Q10. Is boric acid a protic acid? Explain.

Questions number 11 to 15 are multiple choice questions.
Q11. When the electron in hydrogen atom jumps from $\mathrm{n}=4$ to $\mathrm{n}=1$ state, The number of spectral lines emitted is:
(a) 15
(b) 9
(c) 6
(d) 3

Q12. The bond order of $\mathrm{N}-\mathrm{O}$ in $\mathrm{NO}_{3}^{-}$ion is :
(a) 0.33
(b) 1.0
(c) 1.5
(d) 1.33

Q13. Most stable carbonium ion is :
(a) $\left(\mathrm{CH}_{3}\right)_{3} \mathrm{C}^{+}$
(b) $\mathrm{CH}_{3} \mathrm{CH}_{2}{ }^{+}$
(c) $\left(\mathrm{CH}_{3}\right)_{2} \mathrm{CH}^{+}$
(d) $\mathrm{CH}_{3}{ }^{+}$

Q14. Which of these is weakest?
(a) Ionic bond
(b) Vander-walls forces
(c) Covalent bond
(d) Metallic bond

Q15. Two electrons occupying the same orbital are distinguish by :
(a) Azimuthal quantum no.
(b) Magnetic quantum no.
(c) Spin quantum no.
(d) Principle quantum no.

## Q16 To 20 are Assertion and reason type:

In the following question a statement of assertion followed by a statement of reason is given. Choose the correct answer out of the following choices.
(a) Assertion and reason both are correct statement and reason is correct explanation for assertion.
(b) Assertion and reason are correct statement but reason is not correct explanation for assertion.
(c) Assertion is correct but reason is wrong statement.
(d) Assertion and reason both are incorrect statement.

Q16. Assertion : $\mathrm{CuSO}_{4}$ solution is not stored in a Zn vessel.
Reason: Zn forms complex with $\mathrm{CuSO}_{4}$.
Q17. Assertion : $\mathrm{C}-\mathrm{H}$ bond length in $\mathrm{C}_{2} \mathrm{H}_{6}, \mathrm{C}_{2} \mathrm{H}_{4}$ and $\mathrm{C}_{2} \mathrm{H}_{2}$ is same .
Reason : There is single bond between C and H in all these compounds.
Q18. Assertion : PV is constant at constant temperature.
Reason : Real gas deviate from ideal behaviour at high pressure and low temperature.

Q19. Assertion : The free gaseous ${ }_{24} \mathrm{Cr}$-atom has six unpaired electrons.
Reason: $(n+I)$ rule is followed for determining the orbital of the lower energy.
Q20. Assertion : Graphite is a good conductor of heat and electricity.
Reason : Graphite has all the electrons firmly held in C-C sigma bonds.

## (Section-B)

Q21. For the gaseous equilibrium reaction, $2 \mathrm{SO}_{2}+\mathrm{O}_{2} \rightleftharpoons 2 \mathrm{SO}_{2}$ The value of $\mathrm{K}_{\mathrm{p}}$ at $427^{\circ} \mathrm{C}$ is $1.8 \times 10^{-3} \mathrm{Kpa}$. Calculate $\mathrm{K}_{\mathrm{c}}$ for the reaction at 700 K . ( Given: $\mathrm{R}=0.082$ )

Q22. State and explain : (i) Pauli-Exclusion principle (ii) Hund's rule
Q23. Write short note on the following:
(i) Friedal crafts reaction
(ii) Wurtz reaction

## OR

The molecular mass of an alkane is 72 . How many structural isomers are possible for this alkane? What are the IUPAC name of these isomer?

Q24. Assign oxidation number to the underlined elements in each of the following compound: (i) $\quad \mathrm{NaH}_{2} \mathrm{PO}_{4}$
(ii) $\mathrm{K}_{2} \mathrm{CrO}_{4}$

Q25. Give two faulty assumptions which lead to Vander-walls equation?

## OR

100 ml of a gas has a pressure of 600 mm . What will be the volume of the gas if :
(i) pressure is doubled $\quad$ (ii) pressure is halved? Temperature is constant.

Q26. How are nitrogen and sulphur identified in an organic compounds? Give equation for the chemical reactions.

Q27. What is meant by Gibb's free energy change? The sign of Gibb's energy is very important. Justify the statement.

## (Section-C)

Q28. A sample of 0.5 gm of an organic compound was treated according to Kjeldahl's method. The ammonia evolved was absorbed in 50 ml of $0.5 \mathrm{M} \mathrm{H}_{2} \mathrm{SO}_{4}$. The residual acid required 60 ml of 0.5 M solution of NaOH for neutralization. Find the percentage composition of nitrogen in the compound.

Q29. Using s, p, d, f notation, Describe the orbital with the following quantum numbers:
(i) $\mathrm{n}=3, \mathrm{I}=1$
(ii) $n=4, I=2$
(iii) $n=5, I=3$

Q30. How will you explain the following observations:
(i) $\mathrm{K}_{2} \mathrm{CO}_{3}$ can not be prepared by Solvay process.
(ii) BeO is almost insoluble but $\mathrm{BeSO}_{4}$ is soluble in water.
(iii) Why are alkali metals not found in nature?

Q31. Balance the following reactions by lon-electron method:
(i) $\mathrm{Cr}_{2} \mathrm{O}_{7}^{-2}+\mathrm{SO}_{2} \longrightarrow \mathrm{Cr}^{+3}+\mathrm{SO}_{4}^{-2}$ (In acidic medium)
(ii) $\mathrm{I}_{2}+\mathrm{OH}^{-1} \longrightarrow \mathrm{I}^{-}+\mathrm{IO}_{3}^{-} \quad$ (In basic medium )

## OR

Predict if the reaction between the following is feasible:
(i) $\mathrm{Ag}^{+}{ }_{(\mathrm{aq})}$ and $\mathrm{Cu}_{(\mathrm{s})}$
(ii) $\quad \mathrm{Ag}_{\text {(s) }}$ and $\mathrm{Fe}^{+3}{ }_{(\mathrm{aq})}$
(iii) $\mathrm{Fe}^{+3}{ }_{\text {(aq) }}$ and $\mathrm{I}^{-}{ }_{(\text {aq })}$
( Given: $\mathrm{E}_{\mathrm{Ag}+/ \mathrm{Ag}}^{0}=0.80 \mathrm{~V}, \mathrm{E}^{0}{ }_{\mathrm{Cu}+2 / \mathrm{Cu}}=0.34 \mathrm{~V}, \mathrm{E}_{\mathrm{F}+3 / \mathrm{Fe}+2}^{0}=0.77 \mathrm{~V}, \mathrm{E}^{0} \mathrm{I}_{2} / \mathrm{I}^{-}=0.54 \mathrm{~V}$ )

Q32. Assuming complete dissociation, Calculate the PH of the following solutions:
(i) 0.001 M HCl
(ii) $0.005 \mathrm{M} \mathrm{Ca}(\mathrm{OH})_{2}$
(iii) $0.005 \mathrm{M} \mathrm{H}_{2} \mathrm{SO}_{4}$

Q33. Explain the following:
(i) Boron is unable to form $\mathrm{BF}_{6}^{-3}$ ion.
(ii) White fumes appear around the bottle of anhydrous $\mathrm{AlCl}_{3}$.
(iii) $\left[\mathrm{SiF}_{6}\right]^{-2}$ is known whereas $\left[\mathrm{SiCl}_{6}\right]^{-2}$ is not known.

Q34. Which of the following process are accompanied by increasing or decreasing entropy?
(i) Dissolution of iodine in a solvent.
(ii) A partition is removed to allow gases to mix.
(iii) HCl is added to $\mathrm{AgNO}_{3}$ solution to form ppt of AgCl .

## OR

Arrange the following in the increasing order of entropy and explain the reason.
(i) 1 mole water at 298 K and 1-atm pressure.
(ii) 2 mole of water at 273 K and 1 -atm pressure.
(iii) 1 mole of water at 373 K and 1 -atm pressure.

## (Section- D)

Q35. (A) Write the important features of linear combination of atomic orbitals.
(B) Account for the following :
(i) $\mathrm{H}_{2} \mathrm{O}$ has bent structure whereas $\mathrm{CO}_{2}$ molecule is linear.
(ii) At room temperature, $\mathrm{H}_{2} \mathrm{O}$ is liquid whereas $\mathrm{H}_{2} \mathrm{~S}$ is gas.
(iii) Boiling point of HF is higher than HCl .

OR
(A) What is molecular orbital theory? Sketch the molecular orbital diagram of $\mathrm{N}_{2}$ and $\mathrm{O}_{2}$.
(B) Describe the hybridisation in case of $\mathrm{PCl}_{5}$. Why the axial bonds longer as compared to equitorial bonds ?

Q36. (A) Discuss the mechanism of electrophillic substitution in benzene ring wit examples.
(B) what are the necessary conditions for any system to be aromatic.?

## OR

(A) How will you convert benzene into:
(i) P-nitrobenzene
(ii) Acetophenone
(iii) Bromobenzene
(B) Write chemical equations for combustion reaction of the following hydrocarbon:
(i) Butane
(ii) Pentene

Q37. (A) Derive the relationship between $K_{p}$ and $K_{c}$ for a reversible reaction.
(B) In the reversible reaction, $A+B \rightleftharpoons C+D$, The initial concentration of each of $A$ and $B$ is 0.8 . At equilibrium, molar concentration of $C$ is 0.6 . Calculate $\mathrm{K}_{\mathrm{c}}$ for the reaction.

## OR

(A) Derive the following relation, $\mathrm{PH}+\mathrm{POH}=14$.
(B) Solubility of AgCl in water is $1.06 \times 10^{-5} \mathrm{~mol} / \mathrm{litre}$ at 298 K . Calculate its $\mathrm{K}_{\mathrm{sp}}$.
(C) Write the conjugate acids for $\mathrm{HCOO}^{-}$.
